

PLAY AND RECREATION FOR THE OPEN COUNTRY. By Henry S. Curtis. Boston: Ginn and Company. 1914. Cloth, 8vo. Illustrated. 265 pp. Price, \$1.16 net.

The greatest problem of our rural communities is how to make country life attractive enough so that farm people will find it satisfying and be content to remain on the farm. "Play and Recreation for the Open Country," by Henry S. Curtis, is an attempt to show some ways in which the adventure and romance and social coöperation which the country had in the days of the pioneer, but which it has so largely lost, can be brought back to country life. It contains many helpful suggestions for the organization of recreation in the rural home, in the rural school, and in the rural community. It is intended for parents, teachers, and other students of rural life.

SKETCHES FROM NATURE. By John MacWhirter. New York: Funk and Wagnalls Company. Small 4to, cloth. Color Plates. Price, \$1.50 net.

The student of drawing will find "Sketches From Nature by John MacWhirter, with its color reproductions, is full of helpful suggestion. "Intensive Farming" by L. C. Corbett is a discussion of the meaning, method and value of intensive methods in agriculture. This book is designed for the convenience of practical farmers who find themselves under the necessity of making a living out of high-priced land.

THE PROBLEMS OF SCIENCE. By Federigo Enriques. Chicago: Open Court Publishing Co.: Cloth, 8vo. 375 pages. Price, \$2.50 net.

Federigo Enriques, the author of "The Problems of Science," is professor of projective and geometric drawing in the University of Bologna, and is one of the most conspicuous of contemporary Italian scientists. His book, admirably translated by Katharine Royce, and prefaced with an introduction by Professor Josiah Royce, who holds the chair of the History of Philosophy in Harvard University, well illustrates how "the end for which we ought to strive to-day is scientific education, which shall enable the workers in any field whatsoever to understand better how the object of their own research is subordinated to more general problems."

PROGRESSIVE FURNACE HEATING. By Alfred G. King. New York: Sheet Metal Publishing Company. 1914. Cloth, 8vo. Illustrated. 280 pages. Price \$2.50.

In "Progressive Furnace Heating" Alfred G. King, the author, has furnished twenty chapters that serve as a complete modern guide to warm air furnace heating installation, with working plans and methods of estimating. The drawings and diagrams are well selected and most helpful.
